iBug – Find the bug

This game is a 4x4 grid game where you have objects (bugs) in each square. The aim of the game is to click on the bugs, which will change colour, finding the red bug which will result to the game ending (player winning). The score is calculated by time in seconds and milliseconds. The quicker you find the red bug, the higher your score will be.

The website design has a colour scheme of Red, Blue and Black which are used through out the different pages, content, navigation and the game itself on the website. On each page there is a header (displaying the logo/name of the game), navigation bar and footer which stays the same though out the website. The content for each page would be different.

The navigation bar has links to the different pages of the website which are:

- ***Homepage***
 - The homepage will be the landing page of the website. This is where the game would be advertised briefly to direct the player/user to the game page or to register and make an account.
- ***About***
 - The about page will contain the description of the game and perhaps a final report of the project.
- ***Play***
 - The game will be on the Play page where users can play the game.
- ***Scoreboard***
 - The scores of all players who are registered to the website will be shown on the scoreboard with the highest score on the top.
- ***Login/Register/Logout***
 - Users will be able to register on the website and log in to have their scores recorded in the high score table.
